(caractéristiques techniques)

J5407

- 1- **The 125mm round posts** are made of laminated timber, which have not been treated with chrome or arsenic. Splinter-free, the laminate provides great strength and dimensional stability. The posts are protected from wear and tear caused by fungi and insects.
The caps are made of injection moulded polyamide.

- 2- **The platform floors** are made from a 18mm thick, non-slip polyethylene material.

- 3- **The 16mm diameter rope** is made of galvanised steel cable covered with polyester.

- 4- **The tubes** are made of 40mm diameter stainless steel, guaranteeing lasting durability and reliability of the equipment.

- 5- **Injection moulded polyamide fixings** connect the posts with the platforms and the various play features. They are non-toxic, flameproof and U.V. resistant. The thickness of the polyamide makes the equipment both strong and vandal resistant.

- 6- **The climbing holds** are made of polypropylene. They are non-toxic, inflammable and shock and UV resistant. They give the units their strength and help to protect them from vandalism.

7- Injected aluminium elements are fixed on the posts with self-drilling screws to provide links between the ropes and the posts.

8- The fixings are made of stainless or plated steel and protected by anti-vandalism polyamide caps.
